ENERGY AUTONOMY

The Independent Kinetic and Fusion Backbone of AI Sovereignty.

ZERO_EXTERNAL_DEPENDENCY

HYBRID GENERATION

Leveraging Ocean Dynamics and Particle Logic.

SUSTAINABLE STRATEGY

Oceanic Kinetic Mesh

Harnessing the relentless energy of deep-sea currents and surface waves. A network of sub-surface turbines provides 40% of the island's base-load power with zero visual impact.

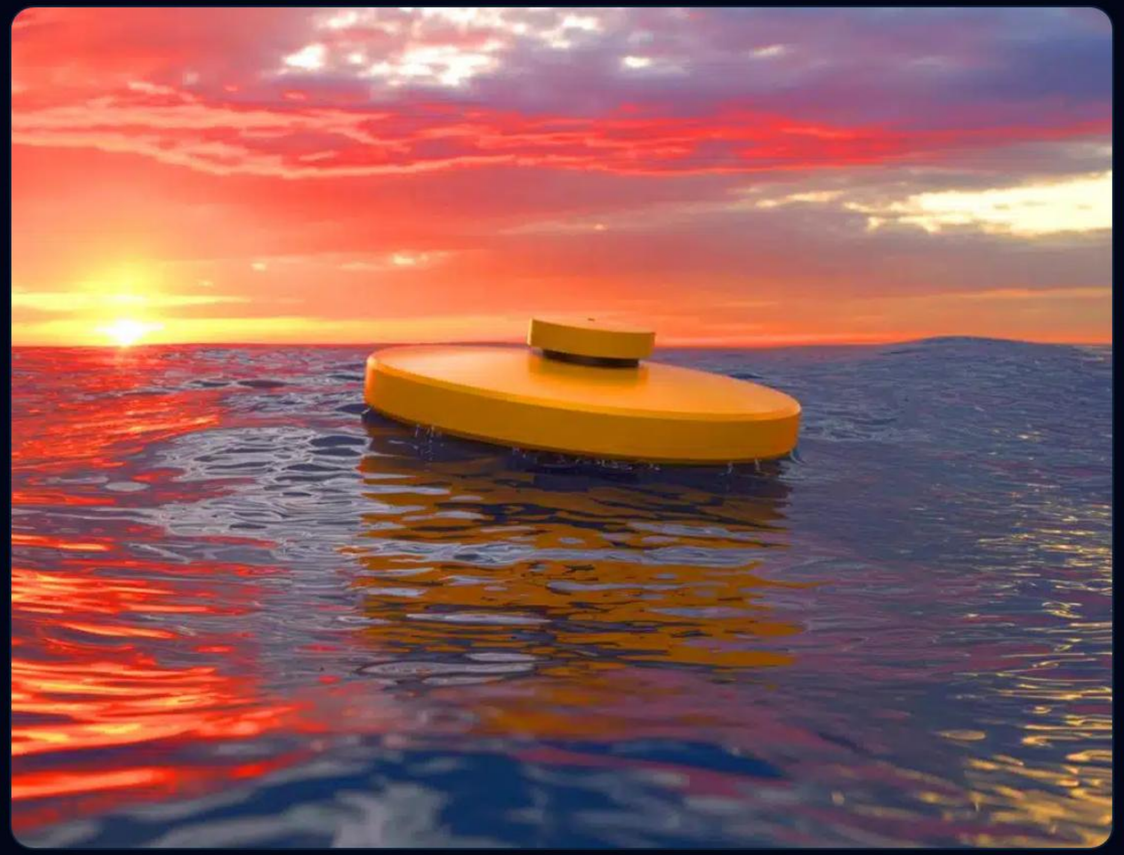
Micro-Fusion Core

The "Heart of the Island." A secure, submerged micro-nuclear facility provides 60% of high-density energy required for petascale compute cycles and defense systems.

KINETIC WAVE FARM

Encircling the island's outer perimeter, the wave farm acts as both a power generator and a kinetic dampener for the 45° defensive walls.

- **High-Yield Harvesting:** Optimized via AI to adjust buoy resistance in real-time based on wave frequency.
- **Integrated Mesh:** Connected directly to the SODR Submerged Compute Ring for efficient cooling-energy exchange.



ENERGY DISTRIBUTION

Wireless Transfer

Microwave power transmission to localized island districts, eliminating traditional cable infrastructure and potential failure points.

Graphene Storage

Solid-state graphene batteries located in the island's bedrock hold 48 hours of emergency reserve for the entire population.

Smart Grid AI

Predictive energy routing ensures power is prioritized for life-support and dome integrity during storm events.

POWER ALLOCATION

Sector	Allocation (%)	Priority Level	Source Primary
Compute & SODR Ring	45%	CRITICAL	Micro-Fusion
Defensive Shield (Dome/Walls)	25%	CRITICAL	Hybrid Mesh
Residential & Districts	20%	HIGH	Kinetic Oceanic
Transport & Robotics	10%	OPERATIONAL	Solar Dome Skin

TOTAL GRID OUTPUT

50 GIGAWATTS OF SOVEREIGN POWER

Scaling beyond current national energy standards, AI Island provides the densest energy environment on Earth, optimized specifically for AGI-level processing.

POWER THE SOVEREIGNTY

Partnering for the Future of Energy Independence
